Subject: Critical versus non-critical data

Hello Stephanie,

I am following up on our discussion earlier today about the provision of additional information on the distinctions between critical and non-critical data which was discussed on February 7th in DC. Jeanne Briskin had provided information on this topic in hard copy at the February 7th meeting. The next day (February 8th), she followed up by E-mail, directing you to additional information which can be found on page 30 of the QMP on this topic. Her E-mail indicated this information completed that commitment.

Our study QA leader has indicated that the information contained in the QMP is the definitive information regarding the critical and non-critical analytes. There are no plans to provide more information at this time. However, if you have a specific question you would like us to consider, please feel free to provide it to us and we will get back to you.

On another subject, I have left messages this afternoon with both Lori Wrotenbery, Director of the Oil and Gas Division of the Oklahoma Corporation Commission, and Saba Tahmassebi, Engineering Manager, Land Protection Division at the Oklahoma DEQ, telling them I would like to talk to them about the potential study site in Oklahoma, and that I need to talk with their staff about horizontal monitoring wells.

I spent 3 hours in a meeting with Lori on Wednesday, but she did not have time to stay and discuss the topic, although I mentioned it to her and promised to call her about it.

I hope you enjoy the weekend, and remember Monday is a federal holiday (Presidents' Day).

Michael Overbay, P.G.
